

AI-assisted commerce platform built for Algerian retail

Modern storefront + localized checkout + multilingual shopping assistant + built-in behavior analytics.

Stack

Next.js 15, React 19, PostgreSQL, Drizzle

Payments

Chargily hosted checkout integration

Differentiator

Arabic/French/Darija/English assistant

PROBLEM

Local merchants lose conversions on trust and guidance gaps

- Shoppers struggle to find suitable products quickly.
- Generic checkouts do not reflect local logistics realities.
- Teams lack clear funnel insight for rapid iteration.

SOLUTION

One integrated system for browse, buy, and optimize

Customer layer

- High-performance storefront UX
- Rich PDP, wishlist, reviews, account
- Localized support via AI assistant

Operator layer

- Session timeline analytics
- Assistant search/click telemetry
- Actionable conversion optimization loop

Production-ready technical foundation

Domain	Current capability	Value
Commerce core	Catalog, cart, checkout, orders	End-to-end purchase flow
Identity	Better Auth + Google OAuth	Low-friction account onboarding
Payments	Chargily session creation server-side	Reduced PCI burden and safer flow
AI layer	Catalog-grounded assistant + fallback	Higher confidence and discovery

Localized intelligence compounds over time

- Assistant and session telemetry creates proprietary behavioral data.
- Regional language handling improves recommendation relevance.
- Integrated architecture shortens test-and-learn cycles versus stitched tools.

Execution priorities for the next 12 months

Reliability

Inventory reservation, payment webhook hardening, idempotent order writes.

Growth

SEO content engine, funnel experiments, assistant-led upsell.

Insight

Assistant eval dashboard and conversion intelligence layer.

THE ASK

Fund regional scale with product + growth acceleration

Capital supports engineering velocity, merchant/customer acquisition, and operational robustness to establish Souma as a category-leading commerce platform in Algeria and nearby markets.

Use of funds #1

Product and AI development

Use of funds #2
